

Weird fediverse instances

This list is incomplete; you can help by expanding it

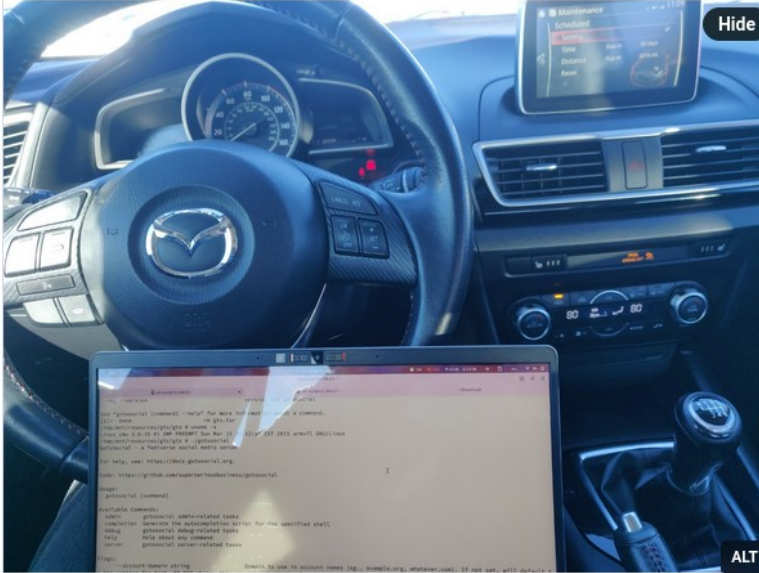

The standard

- Get a Hetzner VPS
- Install Mastodon
- Boring
- At least it's better than Twitter

GoToSocial in a car

Snac2 on an LTE modem

LTE modems are no longer just a modem, but a fully fledged Linux system with a DHCP server

lte.chromebooks.lol is a [Fediverse](#) instance that uses the [ActivityPub](#) protocol. In other words, users at this host can communicate with people that use software like Mastodon, Pleroma, Friendica, etc. all around the world.

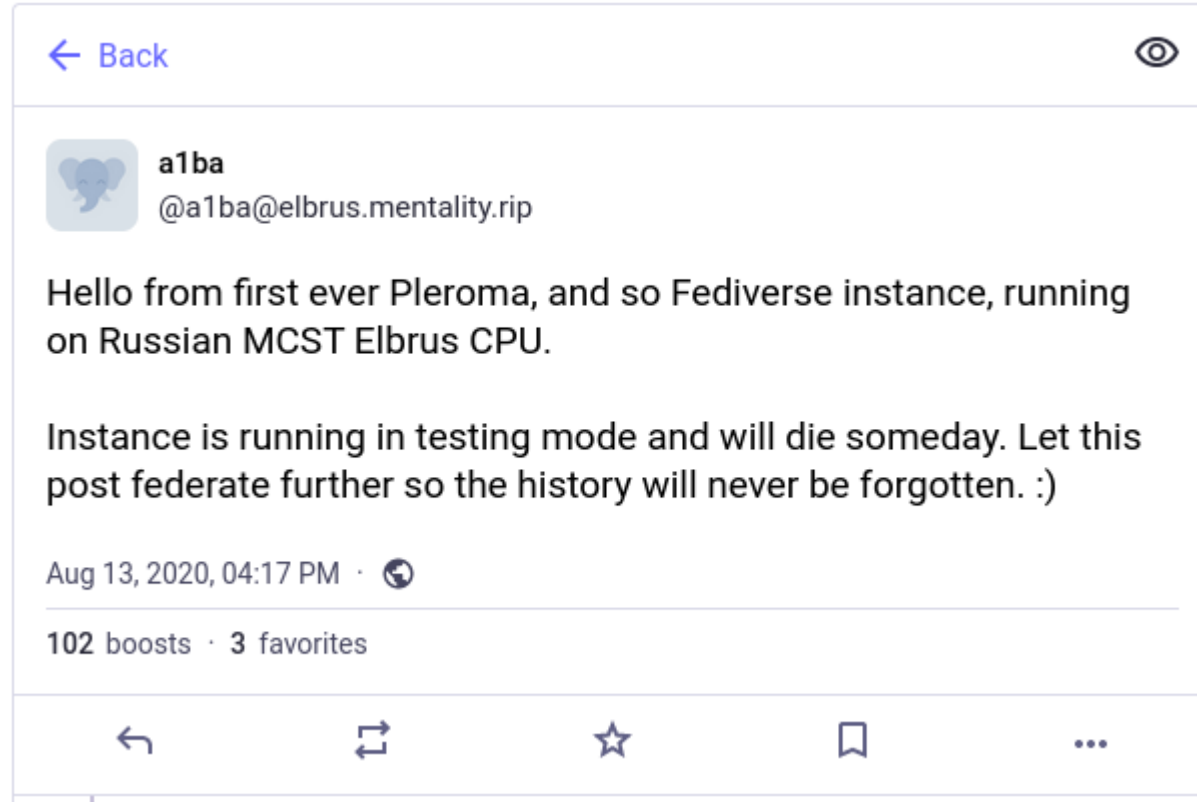

This server runs the [snac](#) software and there is no automatic sign-up process.

The following users are part of this community:

- [@WeirdTreeThing@lte.chromebooks.lol \(WeirdTreeThing\)](#)

This site is powered by [snac](#).

Pleroma on an Elbrus CPU

.ip6.arpa

More info: <https://sdomi.pl>

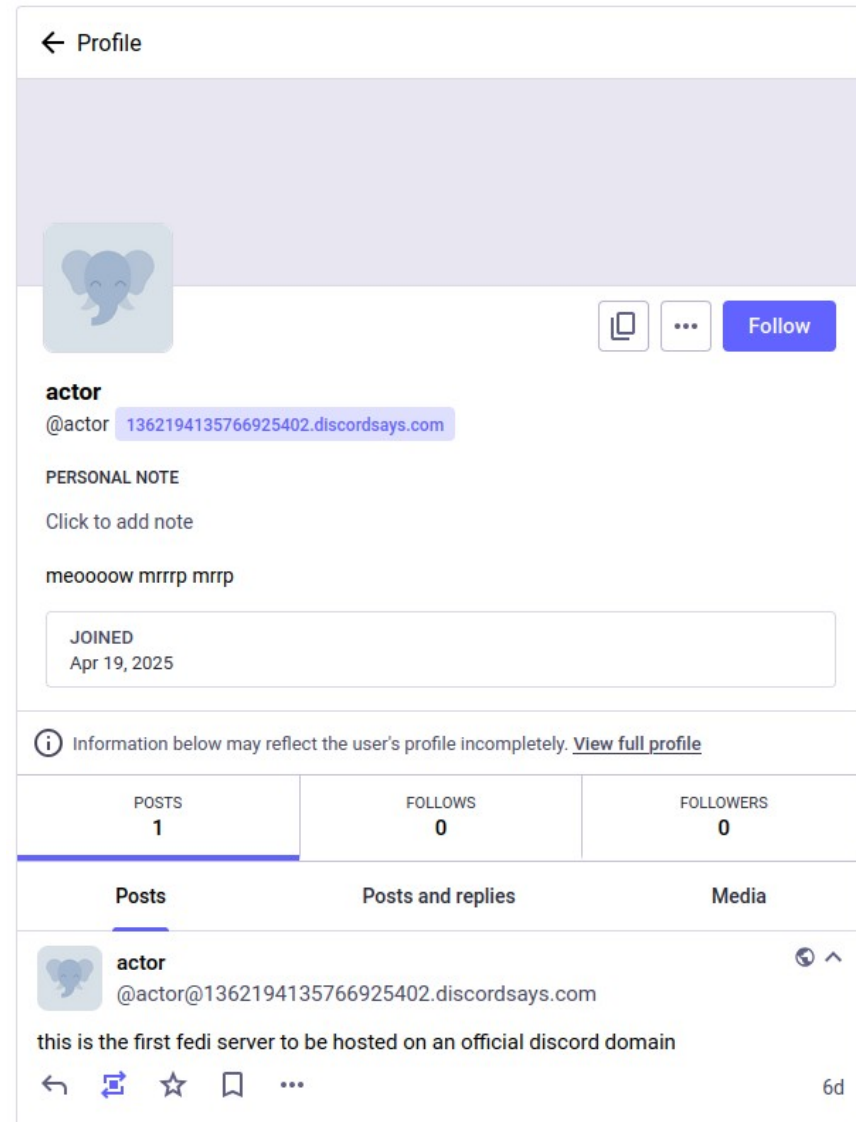

1.6.0.0.8.0.0.b.e.d.0.a.2.ip6.arpa

*home to **49** users who wrote **1540** posts, federating with **11133** other instances*

On a Discord domain

- No idea how it works
- No longer online

Snac2 on Solaris

- Work in progress
- <https://github.com/HackerSmacker/snac2-solaris>

Portable software is robust software

- Please port it to and run it on more:
 - Operating systems
 - Interesting DNS configurations
 - CPU architectures

Inspiration for ports

- GPON SPF
- HP IPAQ
- ESP32
- Microsat

Thanks for listening!
